EDUCATION

- **University of Arizona** Tucson, Az
Masters in Computer Science (Fully-funded) Aug 2021 - Dec 2023
Courses: Advance Topics in Artificial Intelligence, Principles of Machine Learning, Design and Analysis Of Algorithms, Computer Vision, Computer Security, Software engineering, Advanced-Data Visualization
- **Goa University** Goa, India
Bachelor of Computer Science Aug 2014 - May 2018

SKILLS SUMMARY

- **Languages:** (Proficient) Python and MATLAB; (Familiar) C, C++, SQL, HTML, CSS, Django, PostgreSQL, BASH
- **Tools:** Pytorch, TensorFlow, langchain, Plotly, IPython, Excel, Keras, Scikit-learn, streamlit, pygame, Bash, SSH, GCP

EXPERIENCE

- **Allen Institute** Onsite
Software engineer 2 March 2024 - present
 - **Cellpose:** Leveraged transfer learning to enhance AUC of ROC curves for real-time mask generation in the SLAP2 microscope, eliminating manual neuron annotation in voltage imaging data.
 - **iGluSnFR Simulation Pipeline:** Developed and improved a simulation pipeline to model dendrites imaged using a Bergamo microscope in mice expressing the iGluSnFR indicator, varying parameters such as motion amplitude, brightness, and synapse count.
 - **iGluSnFR Motion Correction:** Designed a state-of-the-art motion correction pipeline for dendrite imaging, surpassing existing methods like Suite2p, Caiman, and Patchwarp in performance.
 - **iGluSnFR Source Extraction:** Contributed to a super-resolution microscopy-based source extraction pipeline to identify synapses within dendrites.
 - **iGluSnFR Image Processing Methods:** Co-authored an upcoming paper detailing novel image processing methods for iGluSnFR indicator data analysis.
- **Biotronics** Remote
Machine learning engineer Jan 2024 - Feb 2024
 - **IMF Explainability :** Explored methods to introduce explainability for the Resnet model, which was developed to predict intramuscular fat from ultrasound images of livestock.
- **University of Arizona** Tucson, Az
Graduate Research Assistant - ToMCAT Aug 2021 - Dec 2023
 - **Baseline Task:** Developed network-based finger tapping and imaging rating application using PyGame for the baseline task for Theory of Mind Computer Architecture for Teams (ToMCAT).
 - **Data Acquisition:** Acquired fNIRS & EEG data from multiple subjects.
 - **Real-Time Physio Visualization:** Developed a tool using PyQt5 that plots EEG and fNIRS signals which are multicasted over the network using LSL in real-time.
 - **Data conversion and labeling:** Developed a script that converts XDF files (contains EEG, fNIRS, and Eye-tracking data) into labeled CSV files. Calculated channel quality and filtered out the motion artifacts from the fNIRS signals
 - **Conference paper:** Conducted classification experiments and authored a paper that was submitted to and accepted by NeurIPS 2023 conference.
- **Sree Chitra Tirunal Institute for Medical Sciences & Technology** Kerala, India
Project Scientist January 2021 - July 2021
 - **Neurofeedback game:** Using Python built an application that filtered fNIRS signals in real-time, predicted brain state in real-time using a deep learning model and model predictions were input to a PyGame.
 - **xAI fNIRS system:** Using DeepSHAP developed an explainable AI application for fNIRS signal classification .

- **St. Jude Children’s Research Hospital**

Memphis, TN

Research intern

September 2020 - January 2021

- **Active vs Passive brain activation:** Developed Deep learning-based classification of Active and Passive brain state associated with single trial lower limb motor preparation for stroke patients.

- **Sree Chitra Tirunal Institute for Medical Sciences & Technology**

Kerala, India

Research intern

June 2019 - September 2020

- **Machine Learning Based Classification of fNIRS signals:** Created handcrafted features for fNIRS signals using PCA and ICA for improving the classification accuracy of Machine learning classifiers like SVM and KNN for fNIRS signal classification.
- **Deep Learning Based Classification of fNIRS signals:** Developed a sliding window-based CNN and LSTM Deep Learning model for fNIRS signals by treating signals as an image which boosted the classification from 55% to 97% and solved the issue of data scarcity by increasing the dimension of the dataset. A part of this work was presented at IEEE conference in Japan.

ACADEMIC PROJECTS

- **Resume-GPT:** A Streamlit-based chatbot application that utilizes GPT-3.5-turbo, enabling users to interact and ask questions about a person’s background based on their resume. (Oct ’23)
- **Grocity:** A web application, developed using Django and React and deployed on the Google Cloud Platform, enhances the grocery list-making experience and is accessible on both PC and mobile devices. (May ’23)
- **ToMCAT-offline-Viz:** PyQt5-based GUI not only visualizes the TOMCAT dataset but also presents detailed views of EEG and fNIRS signals, providing a thorough understanding of brain activities. Moreover, it offers a topological perspective, mapping these neural signals in a spatial context. This enhances the user’s comprehension of cognitive processes and aids researchers in observing how team interactions evolve across various tasks and environments. (May ’23)
- **Data poisoning in Machine Learning:** Explored an approach to poison a Machine Learning Model by attaching a Trojan Net which makes the model misclassify with high accuracy (Dec ’22)
- **Multi-Modal emotion recognition:** Currently working on a diffusion-based deep neural network that classifies emotions from a multimodal dataset. (Aug ’22 - Dec ’23)
- **fNIRS data augmentation with GANs:** Using Python implemented a GAN model which generated synthetic fNIRS data to solve issues related to fNIRS data acquisition and model training. (Nov ’21)
- **Explainable medical image classification:** Developed a model which was able to classify Covid19 chest X-ray with an accuracy of 90% and ISIC Skin cancer dataset with an accuracy of 70%. The model classification was explained using LIME, GradCam HeatMap, and Saliency Maps. (Nov ’21)
