EDUCATION

- **University of Arizona** — Tucson, Az
  Masters in Computer Science (Fully-funded) — *Aug 2021 - Dec 2023*
  Courses: Advance Topics in Artificial Intelligence, Principles of Machine Learning, Design and Analysis Of Algorithms, Computer Vision, Computer Security, Software engineering, Advanced-Data Visualization

- **Padre Conceicao College of Engineering** — Goa, India
  Bachelor of Computer Science — *Aug 2014 - May 2018*

SKILLS SUMMARY

- **Languages**: (Proficient) Python and MATLAB; (Familiar) C, C++, SQL, HTML, CSS, Django, PostgreSQL, BASH
- **Tools**: TensorFlow, Plotly, IPython, Excel, Keras, Scikit-learn, Bash, SSH, GCP

EXPERIENCE

- **University of Arizona** — Tucson, Az
  Graduate Research Assistant - ToMCAT — *Aug 2021 - Current*
  - **Baseline Task**: Developed network-based finger tapping and imaging rating application using PyGame for the baseline task for Theory of Mind Computer Architecture for Teams (ToMCAT).
  - **Data Acquisition**: Acquired fNIRS & EEG data from multiple subjects.
  - **Real-Time Physio Visualization**: Developed a tool using PyQT5 that plots EEG and fNIRS signals which are multicasted over the network using LSL in real-time.
  - **Data conversion and labeling**: Developed a script that converts XDF files (contains EEG, fNIRS, and Eye-tracking data) into labeled CSV files. Calculated channel quality and filtered out the motion artifacts from the fNIRS signals
  - **Conference paper**: Conducted classification experiments and authored a paper submitted to NeurIPS, currently under review.

- **Sree Chitra Tirunal Institute for Medical Sciences & Technology** — Kerala, India
  Project Scientist — *January 2021 - July 2021*
  - **Neurofeedback game**: Using Python built an application that filtered fNIRS signals in real-time, predicted brain state in real-time using a deep learning model and model predictions were input to a PyGame.
  - **xAI fNIRS system**: Using DeepSHAP developed an explainable AI application for fNIRS signal classification .

- **St. Jude Children's Research Hospital** — Memphis, TN
  Research intern — *September 2020 - January 2021*
  - **Active vs Passive brain activation**: Developed Deep learning-based classification of Active and Passive brain state associated with single trial lower limb motor preparation for stroke patients.

- **Sree Chitra Tirunal Institute for Medical Sciences & Technology** — Kerala, India
  Research intern — *June 2019 - September 2020*
  - **Machine Learning Based Classification of fNIRS signals**: Created handcrafted features for fNIRS signals using PCA and ICA for improving the classification accuracy of Machine learning classifiers like SVM and KNN for fNIRS signal classification.
  - **Deep Learning Based Classification of fNIRS signals**: Developed a sliding window-based CNN and LSTM Deep Learning model for fNIRS signals by treating signals as an image which boosted the classification from 55% to 97% and solved the issue of data scarcity by increasing the dimension of the dataset. A part of this work was presented at IEEE conference in Japan.

Academic Projects

- **Grocify**: A web application, developed using Django and React and deployed on the Google Cloud Platform, enhances the grocery list-making experience and is accessible on both PC and mobile devices. (May '23)
- **ToMCAT-offline-Viz**: PyQt5-based GUI not only visualizes the TOMCAT dataset but also presents detailed views of EEG and fNIRS signals, providing a thorough understanding of brain activities. Moreover, it offers a topological perspective, mapping these neural signals in a spatial context. This enhances the user's comprehension of cognitive processes and aids researchers in observing how team interactions evolve across various tasks and environments. (May '23)
- **Data poisoning in Machine Learning**: Explored an approach to poison a Machine Learning Model by attaching a Trojan Net which makes the model misclassify with high accuracy (Dec '22)
- **Multi-Modal emotion recognition**: Currently working on a diffusion-based deep neural network that classifies emotions from a multimodal dataset. (Aug '22 - Dec '23)
- **fNIRS data augmentation with GANs**: Using Python implemented a GAN model which generated synthetic fNIRS data to solve issues related to fNIRS data acquisition and model training. (Nov '21)
- **Explainable medical image classification**: Developed a model which was able to classify Covid19 chest X-ray with an accuracy of 90% and ISIC Skin cancer dataset with an accuracy of 70%. The model classification was explained using LIME, GradCam HeatMap, and Saliency Maps. (Nov '21)
